Subject:

Rush search request for 09/775693

Please search in commercial database and in issued patent files:

1) SEQ ID NO:1-and-a-polypeptide encoded by SEQ ID NO:1. Please check to see any of said polypeptide is the same as SEQ ID NO:7 or 8.

Thank you.
MINH TAM DAVIS

For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of p by expressing in a patient's genome that affect the activity of p by expressing the inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps. Additionally, N may be used to produce the colon cancer decided ps. By inserting the nucleic acids into a host cell and culturing the cell by inserting the nucleic acids into a host cell and culturing diagnosis to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37796 to AAH37204 and treatment of present sequences used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides C(II), given in AAG8H454 to AAG83120, from Staphylococcus epidermidis. CC (I) and (II) can have antibacterial activity and therefore can be used containing them which are used to produce the production of vectors (I) was containing them which are used to produce hosts cells which express the CC polypeptides. The polypeptides (II) via the production of vectors (II) cand/or nucleic acids) may then be contained the polypeptides (II) cand/or nucleic acids) may then be considered to vaccinate subjects and to raise antibodies against the bacteria. CC treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to CC AAH55090 represent specifically claimed S. epidermidis genomic DNA (I) the exemplification of the present invention. AAH55091 to CC AAH5509B represent oligonucleotide sequences and primers which are used constitution of the present invention. AAH55091 to CC N.B. The present intention specifically claims all the polynucleotide sequence listing of the present specification, consequences given in the sequence listing of the present specification, consequences are given in the disclosure for SEQ ID NO:4454 so even consequences are present for SEQ ID NO:4455 to 4462.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Align seg 1/1 to: AAG82054 from: 1 to: 367

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Corynebacterium glutamicum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       organic acid synthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Coryneform bacterium; amino acid synthesis; vitamin; saccharide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              18-DEC-2000; 2000EP-0127688
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        20-JUN-2001
                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a area useful for identifying the mutation point of a gene derived from a gene derived analysing the expression profile or expression pattern of a gene derived analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the exemple of the control of the printed specification, but was obtained in electronic format directly from the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nakagawa S,

Colon cancer associated gene sequences, referred to as colon cancer antigens, useful for the treatment, prevention, and diagnosis of colon diagnosis of colon cancer. N-PSDB; AAC98292. disorders such as colon cancer -

Claim 11; Page 1660-1661; 2104pp; English.

can be used in gene therapy. The colon cancer antigen polynicleotides, proteins and antibodies to the proteins are useful for the prevention, proteins and antibodies to the proteins are useful for the prevention, proteins and antibodies of colon disorders, such as colon cancer. The treatment and diagnosis of colon disorders, such as for polynicleotides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins chromosome identification, and as hybridisation probes. The proteins may also be used to prevent diseases such as neural disorders, immune system disorders, muscular diseases such as neural disorders, system disorders, muscular disorders, reproductive disorders gastrointestinal disorders, wounds, renal disorders, infectious diseases, and cardiovascular disorders. AAC98764 to AAC98772 and AAB54007 represent sequences used in the exemplification of the present AAC97991 to AAC98763 encode the human colon cancer associated proteins, called human colon cancer antigens, given in AAB53234 to AAB54006. The human colon cancer antigens can have cytostatic, cardioactive, muscular; neuroprotective, immunomodulatory, gynaecological, gastrointestinal, neuroprotective, immunomodulatory, gynaecological, gastrointestinal, wulnerary, nephrotropic, antiinfective and antibacterial activities, and vulnerary, nephrotropic, antiinfective and antibacterial activities, and

                                                               The present invention relates to human single exon nucleic acid probes (SEMP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SEMPs are derived from human HeLa cells. The SEMPs measuring human gene exingle exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical useful in grading and/or staging of diseases of the cervix, notably

       The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of

                                                                                                                                                                                                                                                                                                       29-JAN-2001; 2001WO-US00661.
  The present invention relates to novel single exon nucleic acid probes (see AAI100010-AAI10067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic aetiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              breast disease and non-carcinoma tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      573 CTCGTAGCTGATGTGCATGAGGTTCTCATCCATGCTCCACGGGTTCTTGG 524

                                                                                                                                                                                                                                                          The present invention relates to toluene degrading enzyme genes and proteins tuth (see AAF23629 and AAB59831), tutl (AAF23630 and AAB59832), tutl (AAF23631 and AAB59833) and tutl (AAF23632 and AAB59834). The toluene degrading enzymes are homologues of pyruvate formate lyase. The toluene degrading enzymes are useful for biological treatment of organic toluene degrading enzymes are useful for biological treatment of organic compounds and in particular for the degradation of toluene and its analogs contained in liquid or solid waste source. The present sequence analogs contained in liquid or solid waste source. The present sequence

(AAV8289) inserted between nucleotides 23050 and 2351, as set forth in subunits contribute to the formation of NWDA-activated cation-selective receptor subunit proteins, the nucleic acids are also useful as probes to Functional glutamate receptors can be assembled from several NMDA subunit proteins of one type (homomeric) or from combinations of also comprises methods for using such receptor subunit proteins of one type (homomeric). The present invention also comprises methods for using such receptor subunits of also comprises methods for determining whether receptors, e.g. invention also comprises methods for determining whether unknown
    Sequence
                         protein(s) are functional as NMDA receptor subunits.
                                                                                                                                                                                                                                                                                                   The present sequence represents a human N-methyl-D-aspartate (NMDA) receptor subunit (NMDAR). The nucleic acid sequence does not contain the 860 5'-most nucleotides, has an additional 11 nucleotides (AAV82891) between nucleotides 1300 and 1301, an additional 24 nucleotides
                                                                                                                                                                                                                                                                                                                                                                                                              Example 3; Columns 261-268; 203pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                              DNA encoding N-methyl-D-aspartate receptor subunit - useful for the assembly of functional glutamate receptor subunits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             N-PSDB; AAV82910.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 1999-069812/06.

                                                                                                                                                                                                          XX
The present sequence represents a human N-methyl-D-aspartate (NMDA)
CC receptor subunit (NMDAR). The nucleic acid sequence does not contain
CC the 366 5'-most nucleotides, by the insertion of 11 nucleotides between
CC the 366 5'-most nucleotides, by the insertion of 11 nucleotides between
CC 1960-1974, nor the 1061 3' nucleotides, as set forth in AAV82889. The
CC 1960-1974, nor the 1061 3' nucleotides, as set forth in AAV82889. The
CC cDNA sequence is derived from clone NMDA21. The NMDAR subunits contribute
CC cDNA sequence is derived from clone NMDA21. The NMDAR receptor subunit
CC cDNA sequence is derived from clone NMDA21. The SMDAR receptor subunit
CC contribute to being useful for the production of NMDA receptor subunit
CC addition to being useful for the production of NMDA receptor subunit
CC addition, the nucleic acids are also useful as probes to identify and
CC approteins, the nucleic acids are also several NMDA receptor subunit
CC isolate nucleic acids encoding related receptor subunits. Functional
CC glutamate receptors can be assembled from several NMDA receptor subunit
CC of different types (homomeric) or from combinations of subunit proteins
CC of different types (heteromeric). The present invention also comprises
CC compounds which affect the function of such receptors .e.g. agonists
CC antagonists and modulators of glutamate receptor function. The invention
CC antagonists methods for determining whether unknown protein(s) are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is a subunit (designated NMDARIA) of the human N-methyl-D-aspartate (NMDA) receptor. This is an ionotropic glutamate receptor which contains cation-specific ligand-gated ion channels. The protein and its coding sequence can be used in disease diagnosis and in research to identify other, similar proteins. They can also be used as probes, for example in genetic screening, and in drug screening, as well as enabling the production of animal disease models.

argininosuccinate synthase (EC 6.3.4.5) - yeast (Saccharomyces cerevisiae)
N;Alternate names: citrulline--aspartate ligase; protein O1228; protein YOLO58w
C;Species: Saccharomyces cerevisiae
C;Date: 30-Jun-1992 #sequence_revision O8-Mar-1996 #text_change 23-Mar-2001
C;Date: 30-Jun-1992 #sequence_revision O8-Mar-1996 #text_change 23-Mar-2001
C;Accession: S59291; JQO779; S61721; S66750; S41983
C;Accession: S59291; JQO779; S61721; S66750; S41983
R;Mannhaupt, G.; Vetter, I.; Schwarzlose, C.; Mitzel, S.; Feldmann, H.
submitted to the EMBL Data Library, August 1995
A;Description: Analysis of a 26kb region on the left arm of yeast chromosome XV.
A;Reference number: S59285
A;Accession: S59281
